

S33D · TETOL · THE WEEKLY LIVING LIBRARY

The Heartwood Chronicle

ISSUE 001 · CIRCLE 240 · 9–15 NOVEMBER 2026

"What do we carry forward, and what do we leave for those who come after us?"

Reporting cutoff: **Wednesday 11 November 2026, 11:45 UTC**
Mid-week edition · the week of Circle 240 was still in progress at the cutoff.

PUBLIC EDITION

CH. 3	Building the Living Tree · progress and technical ledger	8
CH. 4	Learning Together · Notice, Name, Learn, Encounter, Reflect, Return	11
CH. 5	Visions for TETOL's Future	13
CH. 6	Seeds for the Coming Week	14
—	Sources, evidence and colophon	15

Editor's note

This is the first issue of a weekly chronicle for the Heartwood Library, which S33D means to keep as a Living Library for our grandchildren and for generations we will not meet. It records how S33D and TETOL grew this week through Council gatherings, encounters with Ancient Friends, software, discoveries and open questions. It is a record, not a progress report. Every significant claim carries its source and a status, so a future reader can tell what was finished from what was hoped for.

This issue covers a week that is not over. Circle 240 runs from Monday 9 to Sunday 15 November 2026. The reporting cutoff is **11 November 2026 at 11:45 UTC**. Anything after that time appears here as *upcoming* or *proposed*, never as history. Some evidence comes from the weeks just before, because that is where this week's work began. The closing edition's cutoff is Sunday 15 November 2026 at 23:59 GMT.

This is the **public edition**. Private files, family details, exact locations and open security work are left out. Every fact is as it stood at the cutoff; Circle 240's public opening, and anything after it, belong to the closing edition.

How to read the status marks

LIVE	Observed on the public website at the cutoff.	MERGED	In the GitHub source (*main*), but not necessarily deployed.
APPROVED	An owner decision recorded in the Council Canopy (Notion).	DRAFT	An open pull request or a work in progress.
PROPOSED	A design or idea with no build or release authorised.	BLOCKED	Waiting on a decision, a fix or a gate.
REPORTED	Claimed by an agent's report and not independently re-run for this issue.	UPCOMING	Falls after the cutoff, or is not yet scheduled.

> **Freshness warning.** Sources do not all age at the same rate. At the cutoff, the S33D connector's "Current Circle" still read **Circle 235**, while the live website showed **Circle 239**. This chronicle trusts direct reads of the website, GitHub and the Notion Canopy over cached projections, and it says which source each claim came from.

CHAPTER ONE

The Council of Life

Each week the Canopy gathers ten companions: an Ancient Friend, a tree species, a plant, a seed, a leaf, a flower, a fruit, a fungus, a book and a bird. Each is met through a front portrait and an illustrated reverse folio for learning. Circle 240 asks one question.

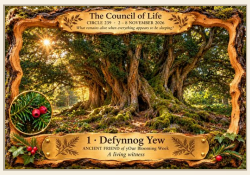

> *"What do we carry forward, and what do we leave for those who come after us?"*

APPROVED Ed approved this exact wording on 10 November 2026 (Council Canopy). Until then, no question had been set for the Circle.

Two Circles, two different states

	CIRCLE 239 · 2–8 NOVEMBER	CIRCLE 240 · 9–15 NOVEMBER
Inquiry	"What remains alive when everything appears to be sleeping?"	"What do we carry forward, and what do we leave for those who come after us?"
Frame	Live-edge European Beech with gold plaques	Live-edge Hornbeam (*Carpinus betulus*) with gold plaques
Public state	LIVE On s33d.life/council-of-life at the cutoff, in the 2D Council and the original 3D TETOL. It is still labelled "Current / Open · 2–8 November", although that week has ended.	APPROVED Ed approved all ten companions for public Council use on 10 November. PUBLICATION HOLD Not yet merged, deployed or activated.
Artwork	Ten fronts (PR #140) and ten reverse folios with transcripts (PR #141), both merged on 4 November	Ten fronts, ten folios and ten transcripts, checksum-verified (v3), with a public-ready set of web images, alt text and an invitation prepared on 10 November. PR #145, the development-only review route, was merged on 10 November at 14:39 UTC with green checks. Activation is a separate draft, PR #146.
Opening Fire	None scheduled	UPCOMING Not yet scheduled. No date or time is to be assumed.

The public Circle 239 edition

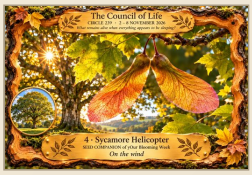

1 · Defynnog Yew

2 · European Beech

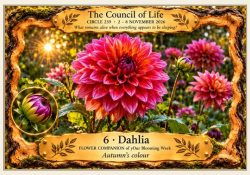

3 · Ginger

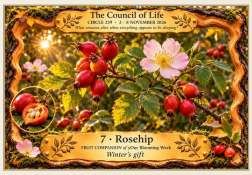

4 · Sycamore helicopter seed

5 · Ginkgo leaf

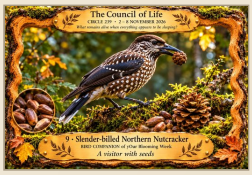

6 · Dahlia

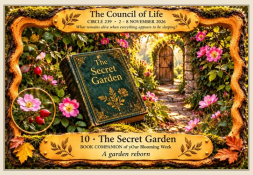

7 · Rosehip

8 · Fly Agaric / Amanita muscaria

9 · Slender-billed Northern Nutcracker

10 · The Secret Garden

The ten original Circle 239 companion portraits (2–8 November 2026), created by S33D and reproduced small, unaltered, from the public source at `main@8127e976`. Ed confirmed their use in this Chronicle on 10 November; that is not permission to publish or distribute it. One historical note stays open: the approved European Beech plates appear to show sweet-chestnut husks rather than beech mast. History is not rewritten. The lesson was carried forward: every Circle 240 plate was checked for the right fruit and seed.

Circle 240 companion artworks by S33D, reproduced from the approved v3 masters (checksums recorded). Ed approved them for public Council use and for reuse in this Chronicle on 10 November 2026. Generated illustrations, not photographs or identification guides.

1 · ANCIENT FRIEND

The Ginkgo at Rokeby

Ginkgo biloba · one individual tree

This is a single, broad, low-forking ginkgo, mapped in the Ancient Friends atlas. Its lineage is ancient: fossil ginkgo leaves more than 200 million years old have been found. This tree's own age is unknown. A lineage is not an individual.

Carry forward: the patience of a line that has outlived empires; leave: a tree well-recorded for whoever comes next.

2 · TREE SPECIES · FRAME OF THE CIRCLE

Hornbeam

Carpinus betulus

Hornbeam has pale, fluted grey bark and the hardest wood of any European tree. It was once used for ox yokes, mill cogs and piano hammers. A clipped hornbeam hedge keeps its dry leaves all winter and gives birds shelter. Its timber frames every Circle 240 portrait.

What quiet strength can we carry into winter?

3 · PLANT

Rosemary

Salvia rosmarinus (formerly Rosmarinus officinalis)

Rosemary is an evergreen herb of scent, bees and long remembrance. In *Hamlet*, Ophelia gives it "for remembrance". It is a kitchen herb; the RHS notes it can irritate sensitive skin. We make no claims about memory or health.

What scent carries a memory for you?

4 · SEED

Tomato Seed

Solanum lycopersicum

A whole summer, folded small. Seed saved from ripe fruit of an open-pollinated variety comes true. Seed from F1 hybrids does not. The Seed Cellar's 3D model is an illustrative, enlarged seed, not a scan. Its route is merged in the source but is not yet on the live site.

What are you saving for a future season?

5 · LEAF

Field Maple

Acer campestre

This is Britain's only native maple. Its leaves are smaller and more rounded than sycamore, and its seed wings sit in a straight line. This week its identification inset was redrawn with short, blunt, rounded lobes, and Ed approved the corrected artwork on 10 November.

What small gold can you notice today?

6 · FLOWER

Calendula

Calendula officinalis · pot marigold

Calendula is a little sun in the garden: an easy hardy annual that bees and hoverflies visit, with edible, peppery petals. It is traditionally used on skin, but a 2015 review found the clinical evidence weak and mixed. This is not medical advice, and it is not French marigold (*Tagetes*).

Where could a little more sun grow?

7 · FRUIT

Medlar

Mespilus germanica

Medlar is an old orchard fruit that sweetens only by waiting. It is picked hard, then "bletted" on trays until evenly soft, brown and sweet. Bletting is not rot: throw away any fruit with mould, a sour or alcoholic smell, or broken skin.

What is ripening slowly in you?

8 · FUNGUS

Horn of Plenty

Craterellus cornucopioides · black trumpet

Horn of Plenty is a dark, gill-less trumpet in the leaf litter. It is a hidden partner of beech and oak roots. **Never eat a wild mushroom identified from a picture, a card or this chronicle.** Foraging needs expert identification in person. Medicinal claims about it are unproven.

Which hidden partners hold you up?

9 · BOOK

Return of the Bird Tribes

Ken Carey · first published in the late 1980s

A visionary book that its author presents as received spiritual teaching about humanity's bond with the Earth. We hold it as a spiritual and literary perspective. It is not history, not ethnography and not Indigenous teaching. No text or cover is reproduced.

What would help you belong to the Earth?

10 · BIRD

Sea Eagle · White-tailed Eagle

Haliaeetus albicilla · species confirmed by Ed

The UK's largest bird of prey, with a wingspan of up to 2.4 m. It was lost as a breeding bird by 1916 and returned through reintroduction: on Rum from 1975 and on the Isle of Wight from 2019. It is specially protected, so watch from afar and never disturb a nest.

What would you see from wider wings?

CHAPTER TWO

Encounters with Ancient Friends

The roots of TETOL are real meetings with real trees. This week's Ancient Friend began as one such meeting, and it now leads the Circle.

The Ginkgo at Rokeby · Circle 240 front portrait. This is a generated illustration drawn from encounter photographs, not a photograph. Approved by Ed on 10 November 2026.

The Ginkgo at Rokeby

Atlas record	`818d9e17-a75f-4c17-a6c6-c75689d47bd0`
Mapped	8 November 2026, 10:05 UTC (record creation time)
Offerings	Two photo offerings on 8 November: "First encounter" and "Untitled Memory"
Species	*Ginkgo biloba*
Individual age	**Unknown.** The record holds no age estimate.
Location	Withheld here. The record marks it as "approximate".
Not yet recorded	Description, girth, lore or age: room for the next visitor.

A member of the S33D community mapped the tree and left photographs as offerings. Permission for its use in the Council was confirmed before publication.

One tree, an ancient line

The first draft of this companion imagined "the Ginkgos of Rokeby": a sunlit grove of several trees by a river. When the encounter photographs arrived, they showed something truer. There was one great tree on open lawn, its broad trunk dividing low into massive limbs, with a carpet of gold leaves beneath and blue hills beyond. The companion was corrected to honour that single individual, and the artwork and every record were revised to match.

The correction mattered for a reason beyond accuracy. Ginkgo is often called a living fossil: fossil leaves more than 200 million years old have been found, and the species is endangered in the wild in China. It is easy to let that lineage leak into a single tree and call it ancient. This tree's age has not been measured or recorded. The chronicle keeps the two apart: *an ancient lineage in gold*, and an individual whose story is still to be learned.

One practical caution from the folio: fallen seeds from female trees have a fleshy coat that smells of rancid butter as it decays. Do not eat or forage them.

> **The question this tree asks of the Circle.** If we cannot know its age, what can we leave it? A careful record, a respectful image, a location kept private, and an invitation for the next visitor to add what they notice.

New Ancient Friends this week

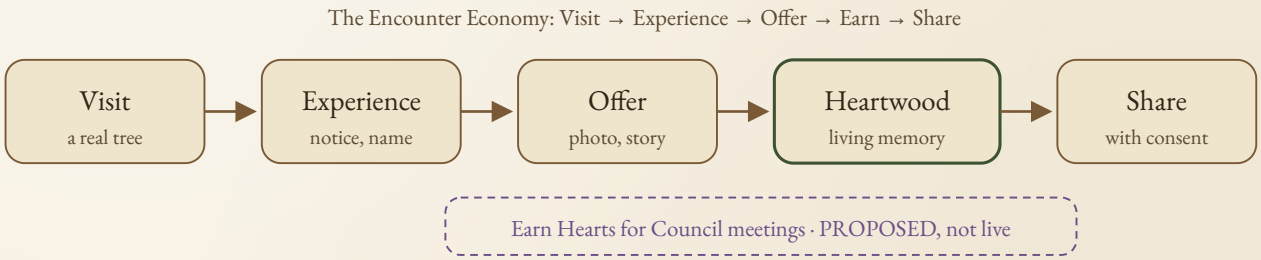

Five Ancient Friends were mapped on 10 November: three English oaks, a common beech and a cultivated apple. They are the first new Ancient Friends of the Circle 240 week that this chronicle could verify. All five are in the East of England, and their locations are not shown. They were added by a keeper of the atlas.

MAPPED (UTC)	TREE	KEEPER-ESTIMATED AGE (NOT MEASURED)	OFFERING
10:39	English Oak	About 200 years (100–300, "informed")	Photo · "First encounter", 10:42
11:16	English Oak	About 75 years (50–100, "informed")	No offering yet
11:45	English Oak	About 375 years (250–500, confidence not given)	No offering yet
15:26	Common Beech	No estimate recorded	Photo · "First encounter", 15:28
16:01	Cultivated Apple	About 75 years (50–100, "informed")	Photo · "Untitled Memory", 16:25

Each age is the keeper's own estimate for that individual tree, recorded in the atlas; none has been measured. The atlas cannot yet list every keeper's new trees by date, so five is a floor, not a total. No visits or conversations have been added to fill the gap.

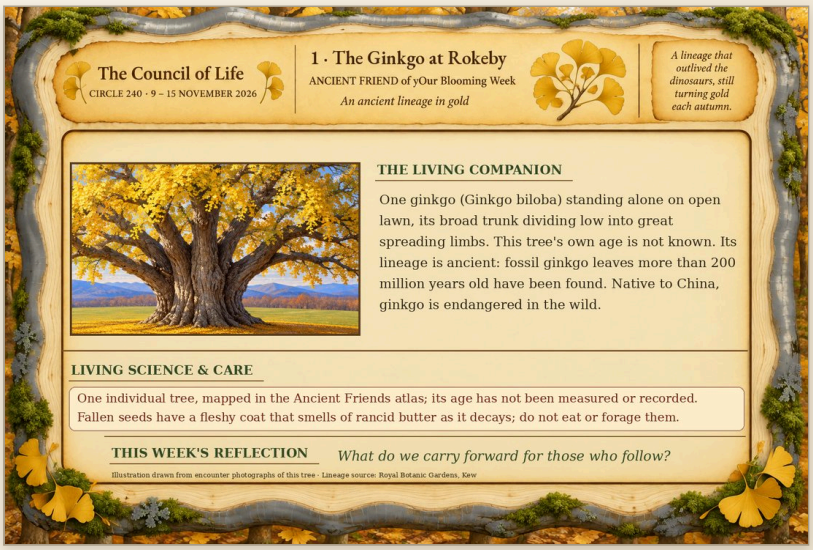

In the weeks before Circle 240, Ancient Friends mapped in the East of England included English oaks, a common beech, a holm oak, a hawthorn, a quince and a crack willow. An atlas search for *Ginkgo* returns seven ginkgos, one of them the Ginkgo at Rokeby.

How an encounter becomes Heartwood memory

The atlas already holds encounters and offerings. On 9 November Ed proposed new Council rewards: logging a meeting with each companion, plus extra Hearts for reflections and real encounters. That is a design proposal with no reward values, rules or release approved (see Chapter 3).

The folio's reflection

The Ginkgo at Rokeby · reverse learning folio, approved on 10 November 2026. The companion's own reflection, "What do we carry forward for those who follow?", stands alongside the Council's inquiry, "What do we carry forward, and what do we leave for those who come after us?"

CHAPTER THREE

Building the Living Tree

TETOL grows like a tree: Roots (Ancient Friends), Trunk (Heartwood), Canopy (Council of Life) and Crown (yOur Golden Dream). This is where each part stood at the cutoff.

Strands of the week

Council 2D and the original TETOL 3D LIVE

Circle 239's ten fronts and ten reverse folios, with accessible transcripts, are served on the live site in both the 2D Council and the original 3D Council Deck. The live build marker is `2fe6837`: the merge of PR #141 on 4 November.

Circle 240 artwork APPROVED NOT PUBLISHED

Ed approved all ten companions for public Council use on 10 November, including the corrected Field Maple. The thirty v3 masters matched their checksums when read back. A public-ready set followed: twenty web images within the 512 kB budget, folio text reading the same as the masters, unchanged transcripts, and an invitation led by the Ginkgo. Nothing has been published.

Technical readiness MERGED · PR #145 DRAFT · PR #146

PR #145, Codex's development-only Circle 240 review route, was merged on 10 November at 14:39 UTC with green post-merge checks. It is not deployed, and production still rejects the route. Activation is a separate draft, PR #146 at `800bddb6`: all five hosted workflows passed on 10 November. It is not merged or released.

Heartwood and Living Library MERGED

PR #144 adds edition-scoped links from Council companions to Library rooms, including the Tomato Seed Cellar doorway. It is on *main* with green CI, but not yet in the live build. This chronicle is the Heartwood's first weekly record; a Chronicle Shelf to hold approved public issues is proposed.

Ancient Friends · Roots LIVE

The atlas is live. This week it gained the Ginkgo at Rokeby (8 November, two photo offerings) and five Ancient Friends on 10 November: three English oaks, a common beech and a cultivated apple. Open quality issues touch the Roots directly: anonymous page views still raise a tree's encounter count.

yOur Golden Dream · Crown GROWING

The Crown records "One Circle · Many Surfaces" as growing. Its Current Circle, website card, 2D Council, Deck doorway and 3D surfaces are merged in source, which is not proof of deployment. The Telegram path is blocked and needs a decision. Council meetings, Hearts and personal Councils remain proposals.

Technical ledger · S33D-life/ancient-roots-map

Source merge is not deployment. Re-read on 11 November at 11:45 UTC, *main* was still `fcbe9111`, the merge of PR #145 (10 Nov 14:39 UTC). Its post-merge checks passed: Lint, Typecheck, Unit and Build (14:42 UTC) and E2E smoke (14:52 UTC). At 11:44 UTC on 11 November the live site's version.json still reported build `2fe6837` (generated 4 Nov 18:56 UTC). That means everything merged after 4 November, including PR #145, is **in the source but not live**. Circle 239 remains the public edition.

PR	WORK	STATUS	EVIDENCE AND OUTSTANDING ISSUES
#146	Activate Circle 240 with approved folios and an unscheduled Fire	OPEN · DRAFT	Head `800bddb6` (10 Nov 18:34 UTC). All five hosted workflows passed: lint, typecheck, unit and build; living frames in Chromium and WebKit; E2E smoke; Council demo (18:37–18:53 UTC). Not merged, not released; that needs Ed's GO.
#145	Private Circle 240 intake and review route (development only)	MERGED 10 NOV	Merged 14:39 UTC as `fcbe9111` (head `816d1bbe`). Post-merge checks green. Not deployed. REPORTED 662 unit tests passed locally.
#144	Council library connections and the Tomato Seed Cellar entry	MERGED 9 NOV	Post-merge CI green. Not deployed.
#142	Council: keep the desktop keyboard companion panel visible during stillness	MERGED 9 NOV	Not deployed.
#122	Free entry and founding gateway (truthful Giveth, no-write introduction)	MERGED 5 NOV	Not deployed. It takes no payments.
#141	Circle 239 living frames: approved reverse folios and transcripts	LIVE	Its merge commit `2fe6837` is the live build.
#140	Circle 239 approved fronts in the 2D Council and the original TETOL	LIVE	Included in the live build.
—	Life Groves privacy and security hardening	IN PROGRESS	Several safety changes are in review. Details are held privately until they ship.
#136 · #130	Council offerings and the no-write Fire experience (review drafts)	OPEN · HELD	The Circle 238 no-write demo (#137) was released on 31 October. These drafts are held.
#128	Atlas: remove simulated immutable anchoring	OPEN · DRAFT	Waiting for review.
#127 · #131	Original TETOL 3D refinements (Circle 238 frames)	OPEN · HELD	Held drafts.
#132 · #133 · #134	Developer workflow: agent instructions, a docs-only CI fast path, a 390px start-up profile	OPEN · DRAFT	Proposals for the release flow. Not adopted.

Release gates in force

Merging, deploying, publishing, data migrations, permission changes and Telegram sends each need Ed's explicit, separate go-ahead. Creative approval is not publication approval. The Crown growth record "One Circle · Many Surfaces" lists the Telegram publishing path as BLOCKED and marks a decision as needed.

> **Known discrepancies.** (1) The live Council page still labels Circle 239 "Current / Open · 2–8 November" on 11 November. (2) The public `circle-239/companions.json` on *main* (`fcbe9111`) still carries `publicationApproved: false`, although Circle 239 is visibly live. (3) The S33D connector's Current Circle projection is still on Circle 235. All three were unchanged on 11 November at 11:44 UTC. They are recorded as reconciliation tasks, and none was changed by this chronicle.

Companion meetings, reflections and the proposed Hearts economy PROPOSED

On 9 November Ed set the next big development step for the Council. It has three parts:

- Log a meaningful meeting with each companion, and reward it with a Heart.
- Give additional Hearts for sharing reflections and real encounters.
- Let Wanderers curate their own weekly Council and earn further rewards.

A five-phase path was drafted:

1. A unique meeting, with a local preview and no real ledger.
2. A signed-in, server-side Hearts ledger, once reviewed.
3. Reflections and encounters, with privacy, moderation and caps.
4. A personal Council builder.
5. A 3D Spiral for shared discovery.

> **Not live, not decided.** No reward values, caps or economics are approved. No Council meetings or reflections are being logged yet. The sample ladder (1 Heart per companion; +3, +3, +11) is explicitly conceptual. Any rewards must be atomic, idempotent and server-side, and must never come from passive page views. The weekly QA sweep found that anonymous page views already increase a tree's public encounter count, so this matters.

Personal Councils and My Spiral PROPOSED

In a personal Council, a Wanderer would choose companions from the catalogue and Ancient Friends, write an intention, and choose private or shared visibility. Canonical Councils such as #240 and #241 would never be overwritten, and no live Fire would be implied. The earlier Ancient Friends Spiral design reviews (V5, V6) are precedent. Their build status was not re-verified this week. Open questions: what counts as a meeting? Must a Council have exactly ten companions? How do moderation and visibility work?

Life Groves and family privacy GATED

Life Groves (births, memorials, celebrations) exists as prototype work. A founding campaign is in draft. There are no payments and no private family sharing yet. Privacy and security hardening comes first.

Developer workflow and quality

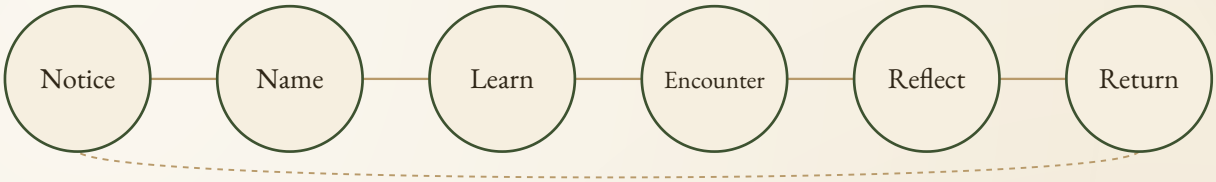

A weekly read-only quality sweep checks the live site. It has identified a set of mobile, navigation and data-provenance fixes, and these are queued.

Agents work in separate lanes: Claude handles the creative masters, knowledge and independent review, and Codex handles source integration and tests. Each lane hands over through restricted folders with checksums. Every merge or release waits for a human GO.

CHAPTER FOUR

Learning Together

The folios are the beginning of a living curriculum. Each companion invites the same six movements.

Leaves that tell their names

Hornbeam or beech? Hornbeam leaves are double-toothed; beech leaves have wavy edges. **Field maple or sycamore?** Field maple leaves are small, with short, rounded lobes and smooth edges, and its seed wings form a straight line. Sycamore leaves are large and coarsely toothed. **Ginkgo:** a fan with radiating veins and a notch in the middle.

Woodland Trust; NC State Extension; Kew.

Seeds we keep

Tomato seed: ferment the seeds in their gel for a few days, rinse them (good seeds sink), dry them fully and store them cool, dark and dry. Sow indoors at about 18 °C. Calendula often self-seeds: collect the curled seeds when brown and dry. Saved seed from F1 hybrids will not come true.

RHS; Brooklyn Botanic Garden.

Patience and spoilage

Medlars are picked hard in October or November. They are then laid on trays, stalks up and not touching, somewhere cool, dark and airy, for two or three weeks. Bletted flesh is evenly soft and brown and smells fruity. Fruit with mould, a sour or alcoholic smell, or split skin is spoiled.

RHS · How to grow medlars.

Hidden partnerships

Horn of Plenty is ectomycorrhizal: it lives in partnership with the roots of beech and oak, in the leaf litter. **Safety:** no illustration, card or photograph is ever enough to identify a wild mushroom for eating. Foraging needs an expert in person, and respect for landowners and local rules.

Naturalis · Mushrooms of the Netherlands.

Herbs, tradition and evidence

Rosemary is a culinary herb tied to remembrance in Shakespeare. The RHS lists it as a possible skin allergen, so we make no memory or health claims. Calendula petals are edible and slightly peppery. Herbalists use calendula on skin, but a 2015 review found the evidence for one clinical use "remains weak". Tradition is honoured as tradition, not as treatment.

RHS; Kodiyan & Amber (2015), *Antioxidants* 4:293.

A bird that came back

The white-tailed eagle was lost as a UK breeding bird by 1916 through persecution and habitat loss. It returned through reintroduction: to Rum from 1975, and to the Isle of Wight from 2019. It is on the UK Amber list and protected under Schedule 1. A story of something carried forward after it was nearly lost.

RSPB; BTO BirdFacts.

Stories with care

Return of the Bird Tribes is read here as one author's spiritual vision, not as Indigenous teaching. Readers are encouraged to seek out Indigenous authors writing about their own traditions. No text is reproduced.

HarperCollins / Open Road listing.

Lineage and the individual

A species can be ancient while an individual tree is young, or simply unknown. The Ginkgo at Rokeby teaches this habit of mind: name what is known, mark what is not, and leave room for the next observer.

S33D atlas record; Kew.

Learning from a correction · the field maple leaf

Corrected inset: short, blunt, rounded lobes; wings in a line.

An illustration can teach the wrong thing beautifully. The first draft of the Field Maple inset showed a leaf closer to sycamore, so it was set aside. It was redrawn against two botanical references (Woodland Trust; NC State Extension): 3–5 palmate lobes, smooth margins, and seed wings held horizontally. Only the inset changed. Ed approved the corrected artwork on 10 November.

Seven invitations for the week ahead UPCOMING

1. Find a ginkgo and look for the notch in its golden fan.
2. Run a fingertip along a hornbeam leaf and feel the double teeth.
3. Collect one field maple leaf and one sycamore leaf, and compare them.
4. Save seed from one tomato and label it with the variety and date.
5. Rub a rosemary leaf and notice what the scent brings back.
6. On a beech-wood walk, look closely at the dark leaf litter, and leave what you find.
7. Sit with a tree and notice the birds that pass.

Kitchen notes

Medlar jelly is the classic use of bletted medlars, and they are also eaten bletted with cheese (RHS). Calendula petals can brighten a salad (RHS). Dried horn of plenty is prized by cooks, but only from a trusted, expertly identified source; never from a picture. This chronicle gives no foraging permission.

> **Accuracy promise.** Every fact in this chapter is drawn from the Circle 240 learning notes, each checked against the named sources on 9–10 November 2026. Where evidence is weak or a claim is traditional, the text says so.

CHAPTER FIVE

Visions for TETOL's Future

A space to dream, clearly labelled. Nothing in this chapter describes a working capability unless it says so.

APPROVED DIRECTION What the steward has chosen

- Council participation becomes a central development priority after Circle 240's ten fronts and folios: meetings with companions, reflections and encounters, and Wanderer-curated Councils (owner direction, 9 November).
- Two clearly separate funding entrances: a reward-based Life Groves pathway alongside the existing Giveth donations project (owner GO, 3 November; no campaign live).
- Historical Councils stay immutable; each new Circle adds a ring.

ACTIVE DEVELOPMENT What is being built

- Circle 240's review route in the 2D Council and the original 3D TETOL (PR #145, merged) and its activation (draft PR #146).
- Edition-scoped doorways from companions into Heartwood rooms, starting with the Tomato Seed Cellar (merged).
- Safety and privacy hardening for Life Groves (merged and draft).

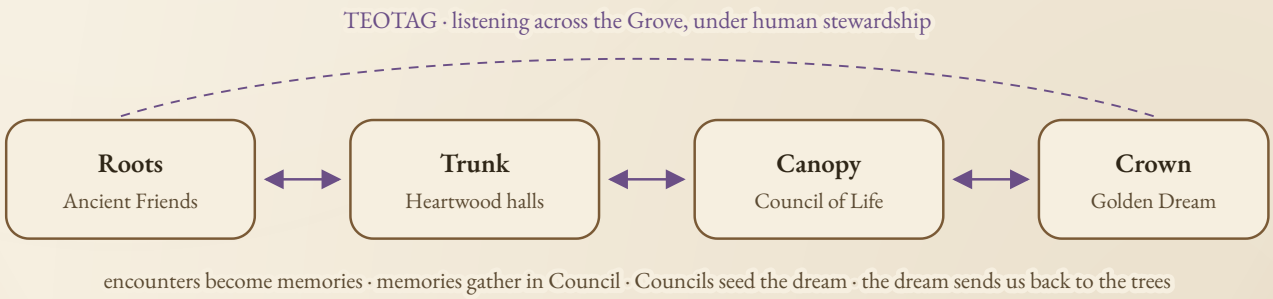

RESEARCH QUESTIONS What must be answered first

- What makes a companion meeting *meaningful* rather than a page view? How are repeat visits counted, and how do anonymous visitors differ from signed-in ones?
- How should Hearts be valued, capped, reversed and kept separate from any token or monetary claim?
- When is a reflection private, shared with curators, or public? How are family and location details protected by default?
- Must a personal Council have exactly ten companions? Who moderates shared Councils?

LONGER-TERM VISION Where the Grove might grow

- **Wanderers curating their own Councils**, gathered where two or more meet: a living room in the Canopy rather than a broadcast.
- **Genuine encounters becoming Heartwood memories**, with Memory Trees and Life Groves that hold births, memorials and celebrations under the care of those they belong to.
- **A planetary library** of species, stories, seeds and knowledge, with Roots (Ancient Friends), the Heartwood halls, the Council canopy and the Golden Dream crown connected as one tree.
- **Ethical Hearts**: rewards for meaningful, verified participation, never for passive views, and never confused with speculation.
- **TEOTAG** as the developing intelligence and collective listening of the Grove: a way of noticing what the Circle has learned and reflecting it back, always under human stewardship.

The Grove as one tree VISION

A picture of intent, not of software. The connections drawn here are aspirations unless Chapter 3 marks them Live or Merged.

CHAPTER SIX

Seeds for the Coming Week

Three achievements

1. **Circle 240's ten companions are approved** for public Council use, with the inquiry. The masters are verified and a public-ready set is prepared. Nothing is published.
2. **Circle 239 is public** in the 2D Council and the original 3D TETOL, with accessible reverse folios.
3. **The Ginkgo at Rokeby** was mapped, corrected to one true tree and linked to its Atlas record. Five more Ancient Friends joined on 10 November.

Three unresolved decisions

1. **Release.** When Circle 240 goes live. Its activation is a draft (PR #146), and release needs Ed's GO.
2. **Deployment.** Several merged changes are not yet live. The Council's "current" label is out of date.
3. **Council Hearts rules.** The meeting definition, values, caps and privacy defaults are still undecided. The privacy gates must close first.

Three next actions

1. Ed reviews PR #146, with a Safari and VoiceOver acceptance check. There is no merge or release without a GO.
2. Ed decides on a release window for *main* `fcbe9111`. Verify *version.json* afterwards, and correct the current-week label.
3. Scope Phase A of companion meetings (local preview, no ledger) once the privacy gates are resolved.

The week in time

Still to come this week UPCOMING

The Circle 240 week continues until Sunday 15 November. No Opening Fire is scheduled, and none is assumed. Circle 240 is not yet public. Any gathering, release or encounter after the cutoff belongs to the closing edition or to Issue 002. The closing cutoff for this Chronicle is Sunday 15 November, 23:59 GMT, independent of the Council Fire schedule.

Decisions recorded this week APPROVED

- **9 Nov.** Ten companions chosen; the Sea Eagle confirmed as *Haliaeetus albicilla*; the Ginkgo corrected to one individual tree.
- **10 Nov.** The inquiry approved word for word.
- **10 Nov.** The Ginkgo approved, with the mapper's permission for Council use.
- **10 Nov.** All ten artworks approved for public Council use, including the corrected Field Maple.

Council Canopy. Creative approval is not publication approval.

What the week taught us

- An imagined grove was really one tree.
- An illustration can teach the wrong leaf; insets are checked against botanical sources.
- Merged is not live: five merges since 4 November await release.
- Sources age at different speeds: the atlas connector still shows Circle 235.

Reflection · What we carry forward

This week a single tree, mapped and photographed by members of our community, became the first companion of a Circle. It was corrected, carefully, from an imagined grove into the one tree that is really there. The lesson reaches past botany. To carry something forward faithfully, we must first see what is really in front of us. We say what we know, we mark what we do not, and we keep private what belongs to the people we love.

The Heartwood Library exists to honour those who came before us, the ancestors and departed loved ones whose trees still stand, and to keep a Living Library for our grandchildren and for generations we will not meet. That is why these pages carry dates, sources and honest gaps as well as pictures: a record they can trust. Seeds saved, medlars waited for, eagles returned, three oaks newly mapped, a ginkgo whose age we do not yet know: each is a small promise kept across time. May this chronicle be one more.

Sources and evidence notes

Sources were last re-read on 11 November 2026, 11:44–11:46 UTC: the live site, GitHub, the atlas and the Canopy. Earlier reads on 10 November are kept unchanged in dated snapshots. Dates are given where older. “Read” means retrieved directly for this issue. “Record” means a document written by a project agent and not re-run for this issue.

Live site and source

- s33d.life/council-of-life — read 11 Nov 11:44 UTC: Circle 239 still “Current / Open”.
- s33d.life/version.json — read 11 Nov 11:44 UTC: build `2fe6837`, generated 2026-11-04T18:56Z (unchanged).
- GitHub S33D-life/ancient-roots-map — read 11 Nov 11:45 UTC: *main* `fcbe9111` (merge of #145); post-merge check runs passed.
- PR #145 — read 15:16 UTC: merged 14:39 UTC; read at 14:32 UTC as a draft at `816d1bbe`; roster labels read at `73207c07`. PR #146 — read 11 Nov 11:45 UTC: draft, head `800bddb6`, five hosted workflows passed.
- PRs #144, #142, #122, #141, #140 — read: state and merge times.
- S33D connector — last read 11 Nov 11:45 UTC (no new trees since 10 Nov): Ancient Friend record 818d9e17; five trees mapped on 10 Nov (locations omitted); Current Circle projection (stale: 235); Crown growth “One Circle · Many Surfaces”.

Natural history

- Royal Botanic Gardens, Kew · Ginkgo biloba
- Woodland Trust · Hornbeam · Field maple
- NC State Extension · Acer campestre
- RHS · Salvia rosmarinus · RHS guides to tomatoes, calendula and medlars
- Brooklyn Botanic Garden · Saving tomato seeds
- Kodiyan & Amber (2015) · Topical calendula review
- Naturalis · Mushrooms of the Netherlands · *Craterellus cornucopioides*
- RSPB · White-tailed eagle · BTO BirdFacts · White-tailed Eagle
- HarperCollins / Open Road Media listing · *Return of the Bird Tribes* (ISBN 9780062116567)

Missing or limited evidence

- No atlas-wide list of new trees by date: other keepers’ encounters on 9–10 Nov are unverified.
- The exact time Circle 239 was published is not recorded in the sources read. The 9 Nov QA run still saw Circle 238 as current.
- The PR #145 local test count is as reported by Codex; its hosted checks are cited as read.
- No companion meetings, reflections or Fire attendance were recorded for Circle 240.

Colophon and provenance

About this issue

The Heartwood Chronicle, Issue 001, covers Circle 240 (9–15 November 2026). It was compiled by Claude (Anthropic) under Ed's editorial direction, from the sources on page 15. The reporting cutoff for this mid-week edition was 11 November 2026 at 11:45 UTC; the closing edition's cutoff is Sunday 15 November 2026, 23:59 GMT. Set in EB Garamond (SIL Open Font License) and DejaVu Sans Mono. A4, with selectable, tagged text.

Artwork

The Circle 240 portraits and folios are generated illustrations, made with GPT-image-2.5 in Ed's Figma account and framed on the Hornbeam template. They are not photographs or identification guides. The Ginkgo at Rokeby was drawn from a text description of encounter photographs; no photograph pixels were used. The ten Circle 239 portraits are original S33D artworks, reproduced small and unaltered from the public source, with their Circle 239 names; Ed confirmed their Chronicle editorial use on 10 November.

Rights and privacy

The ten Circle 240 artworks, with their cover and folio imagery, are approved for public Council of Life use and for reuse in this Chronicle (10 November). Only approved artwork appears. No reference photographs, family details, coordinates or what3words appear.

Reproducing this issue

The editable source is `src/heartwood-chronicle-001.html` with `src/chronicle.css`. `build.py` renders both editions with Chromium (Playwright) and removes the private-only blocks from the public edition. Image derivatives, the asset list, the source-data snapshot and their checksums are kept beside the PDFs.

Corrections

Corrections are welcome. Each issue is a dated record, so corrections are added in the next issue rather than silently changing this one. Before publication, two pieces of database wording on page 3 were replaced with plain English; no facts changed after the cutoff.

Status at the cutoff

Circle 239	LIVE
Circle 240	APPROVED · PUBLICATION HOLD
Public-ready set	PREPARED · NOT PUBLISHED
Opening Fire	UNSCHEDULED
Council Hearts	PROPOSED
Payments, family sharing	NOT LIVE

❧

"The purpose is to record the living story as faithfully as we build it."
